Chaire LOGISTICS CITY

Evolution of warehouse location from 2012 to 2019 in major U.S. metropolitan areas

Université Gustave Eiffel

Dr. Matthieu Schorung, Dr. Laetitia Dablanc (presenter)

Urban studies, geography and urban planning •

Université

- Macro spatial analyses to micro level studies •
- Warehouses, innovations, new trends in consumption and impacts on city logistics

Results available online, eq:

haire

- E-book on warehouse geography in the US
- Observatory of ecommerce mobilities •
- Survey reports on gig workers for instant delivery platforms in Paris, 2016 to 2022
- Logistics real estate and relationships with urban • form, macro analyses

We are hiring: two long-term post-doc positions starting January 2023

Iris

Logistics landscape in large US cities

Changes in the location of logistics facilities reflect the broader transformation of warehousing and logistics as an economic sector

- XXL distribution centers and mega-fulfillment centers (over 50,000 sq m), historical trend of logistics clusters moving away from urban centers

- The search for space in dense areas to meet demand from ecommerce and parcel distribution

State of the art

- Recent studies have looked at the location of warehouses in metropolitan areas and how this has changed over time
- We have identified 74 case studies around the world by 2020 (Bowen, 2008, Cidell, 2010, Heitz and Dablanc, 2015, Giuliano et al., 2016, Kang, 2020)
- Includes numerous North American case studies in Atlanta, Los Angeles, Seattle, Toronto, all US (Kang, 2020), Chicago and Phoenix (Dubic et al., 2020)
- 86% of these studies have demonstrated a shift in the location of warehouses and logistics facilities to peripheral areas
- The location of logistics warehouses is based on several criteria and a complex supply chain cost structure (transportation, accessibility, structure of the regional economy, land and real estate, workforce, last mile)

E-book on warehouse geography in the United States (Schorung et al.)

ATLAS OF

GEOGRAPHY

IN THE

US

MATTHIEU SCHORUNG GIS EMPERT THIBAULT LECOURT

LAETITIA DABLANC

- Mapping effort including latest county business patterns database available (2019)
- Overview at the national level: 45 US metropolitan areas (MSA / CSA) and eight US megaregions
- Historic comparison (from 2012 to 2019)
- Indicators (barycenters, ellipses, warehouse density)
- Different methods of map representation (grid, heatmaps)

1000 warehouses in the Paris region

L'IMMOBILIER LOGISTIQUE DANS LA METROPOLE DU GRAND PARIS

New warehouse land areas over 5,000 sq m In red: Paris region, In orange: rest of France

Université Gustave Eiffel

Amazon warehouses from Washington DC to NYC

Schorung, Lecourt, Logistics City Chair, 2021

Automated data collection (Oliveira, Schorung, Dablanc, 2022)

- Points of interest from OpenStreetMap to identify urban v suburban areas
- Warehouse rental prices from real estate market sites

Wealthy areas served by warehouses located elsewhere: example of Issy/Boulogne in the Paris metro area

Map 1. Share of logistics establishments by state in 2019.

[Q6] Evolution_Entrepots_2012_2019_%

Les surfaces des rectangles de l'histogramme sont proportionnelles au nombre d'unites spatial dans chaque classe définie sur la variable : Tuveltion_intropols_2012_2019_% maximumi- 14 pour la classe n° 4

- States with the most warehouses (2019): California, Texas, NY+NJ
- Metro areas with the most warehouses (2019): NY, LA+Riverside, Chicago, Dallas, Atlanta

An uneven spatial distribution of logistics warehouses

- In 2019, only nine states had more than 500 logistics facilities (CBP 493): NY (589), Pennsylvania (706), NJ (736), Georgia (752), Ohio (781), Illinois (791), Florida (795), TX (1616) and Cal (2238)
- Eight metro areas had more than 300 logistics facilities in 2019
- The trend is for the main logistics clusters to become even bigger ('metropolization of logistics')

Tab. 1. Number of logistics establishments per major metropolitan areas listed as category 493 in the County Business Pattern database (2012, 2015, 2018, 2019) and the change between 2012 and 2019.

MSA	2012	2015	2018	2019	Evolution 2012-2018 (%)
Atlanta, Sandy Springs, Roswell	371	376	419	434	16.9
Chicago, Naperville, Elgin	496	544	580	602	21.3
Dallas, Fort Worth, Arlington	371	432	505	526	41.7
Houston, The Woodlands, Sugar Land	281	308	362	360	28.1
Los Angeles, Long Beach, Anaheim	573	639	707	713	24.4
New York, Newark, New Jersey	757	795	861	890	17.5
Philadelphia, Camden, Wilmington	275	304	339	345	25.4
Riverside, San Bernardino, Ontario	360	428	496	523	45.2

An analysis of warehousing development patterns in four metropolitan areas

Texas Triangle megaregion

- Dallas-Fort Worth-Arlington MSA
- Houston-The Woodlands-Sugar Lands MSA
 Northeast megaregion
- New York-Newark-New Jersey MSA
- Philadelphia-Camden-Wilmington MSA (south of the Northeast corridor)

Methodology

- Warehousing development patterns in four U.S. metropolitan areas based on the County Business Patterns database (U.S. Census Bureau) for 2012 and 2019 data at zip codes granularity
- The same data period (2012-2019) was defined to ensure consistency in the analysis
 - Warehouse = establishment classified in subsector 493 ("Warehousing and Storage") of the North American Industry Classification System
 - 'Establishments engaged in operating merchandise warehousing and storage facilities'
- This research used R to compile, aggregate the data and the QGIS software was used to map establishments and provide spatial analysis and barycenters

DALLAS-FORT WORTH-ARLINGTON MSA

- 376 warehouses in 2012 and 533 in 2019 (+42%)
- Northeast, southeast, and the southwest near Arlington
- Dual pattern of development: more logistics facilities in the first ring around Dallas and at the same time rapid development on the edges of the metro area
- The standard deviational ellipse area from the barycenter increased by 20% (2324 km² in 2019)

HOUSTON-THE WOODLANDS-SUGAR LANDS MSA

- A fast-growing logistics hub: increase of 29% from 281 to 363 warehouses
- Sunbelt cities: strong demographic and economic growth, urban sprawl
- Three main logistics clusters: around the Port of Houston to the southeast; around the airport to the north; and a west/northwest axis from downtown (I10, Washington Avenue, I610, Hempstead Road)
- The standard deviational ellipse area from the barycenter increased by 14% (2328 km² in 2019)

NEW YORK-NEWARK-NEW JERSEY CSA

- Major warehousing hub in the US: from 844 to 993 warehouses (+18%)
- Continues to grow, confirming the metro area's role as an international and domestic gateway
- High concentration of logistics establishments, making the map harder to read than in the other case studies
- A distinctive form, essentially confined to the megacity's urban corridor
- Why? Major transportation infrastructures (Port of New York-New Jersey, Interstates, Newark and La Guardia airports) & the limited number of available land parcels in a highly urbanized region
- The standard deviational ellipse area (from the barycenter) was 4907 km² in 2019 (a decrease of 7% between 2012 and 2019)

Zip Codes centroids between 2012 and 2019

Université Gustave Eiffel

PHILADELPHIA-CAMDEN-WILMINGTON CSA

- The number of warehouses grew significantly from 324 in 2012 to 395 in 2019 (+22%)
- The number of warehouses per 10,000 residents increased by 20% from 0.45/10,000 to 0.55/10,000
- Most warehouses follow the metropolitan corridor along a longitudinal northeast/southeast axis that concentrate major highway and rail transportation infrastructure as well as major ports and airports
- Confirms the major trends in the logistics real estate market (periphery and center)
- Standard deviational ellipse area (from the barycenter) increased by 17%
 - in 2012 it was 4764 km²
 - in 2019 it was 5568 km²

Zip Codes centroids between 2012 and 2019

Université Gustave Eiffel

A look at the megaregion scale: logistics clusters

Conclusions and discussions

- The number of warehouses in the four metropolitan areas grew rapidly between 2012 and 2019
- The Dallas area is archetypical of a booming warehousing cluster (+42% between 2012 and 2019) and sprawling metropolitan area
- Houston has also experienced strong growth in numbers of warehouses (+29%) but with less urban sprawl overall than Dallas
- Warehouses cluster along major infrastructures (Port of Houston, Houston International Airport) and interstate highways
- The two other case studies (Philadelphia and New York) have different trajectories
- Especially, the New York-Newark-New Jersey area has experienced moderate growth in the number of logistics establishments (+18%) as this growth occurred in an already mature and well-developed logistics market
- The New York case shows an increase in urban/first ring locations for logistics facilities
