Deliveroo | Apply Now! Deliver with Deliveroo

deliveroo News Support Perks [Apply to be a rider](#) Menu

Deliver with Deliveroo

Find work that suits you

Apply now

Make money on your own schedule with a scooter, bike or car.

What you'll need

- ✓ Scooter, bike or car (with licence and insurance)

Food and parcel deliveries are changing!

- Investigate digital mediation of current gig economy courier practices
- Look at inefficiency in delivery and collections
- Promote fairness and justice for workers
- Consider how systems are leading to or away from sustainable modes of transport

Reconstructing the gig worker lived experience

Mix of online survey methods, and face to face workshops

We did

DEVELOPED
METHODOLOGIES FOR
STUDYING GIG WORK
REMOTELY

CONDUCTED
FIELDWORK IN
MANCHESTER, YORK,
EDINBURGH (NEARLY
PARIS ;) – DESPITE A
PANDEMIC

UNCOVERED
CHALLENGES FACED
BY GIG LOGISTICS
WORKERS

WORKED WITH
COMMERCIAL
PARTNERS (HERMES,
ZEDIFY, ECOFLEET) TO
UNDERSTAND THEIR
BUSINESS AS USUAL

LOOKED AT WAYS OF
DISTRIBUTING WORK

IN YORK

Reconstructing the gig worker lived experience

Two in-person cycle courier workshops with 'Switch-Gig' in York and Manchester

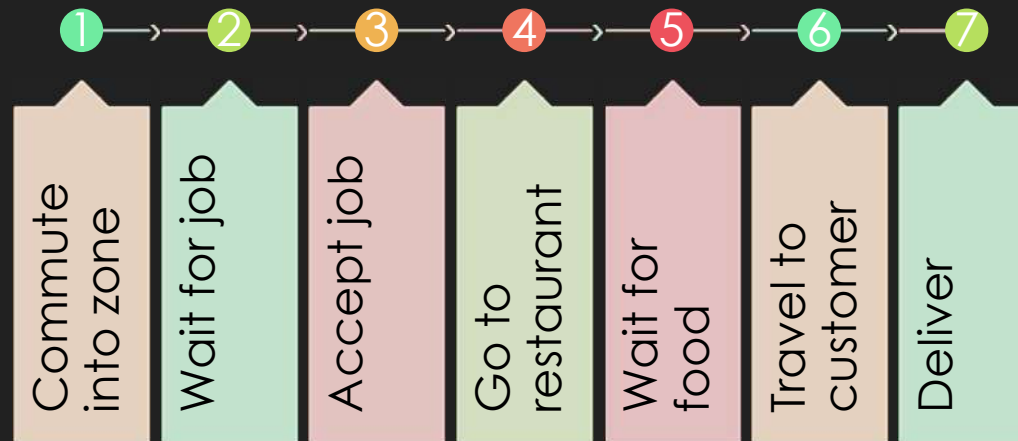

```
graph TD; A[Two in-person cycle courier workshops with 'Switch-Gig' in York and Manchester] --> B['Critical incident' survey method focusing on 'unfairness' (snowball sampling)]; B --> C['Edinburgh protocol' remote method for logging & discussing gig work lived experience];
```

'Critical incident' survey method focusing on 'unfairness' (snowball sampling)

'Edinburgh protocol' remote method for logging & discussing gig work lived experience

○ Method 1: In-person workshops

Method 2: Critical incident survey

- Adapts software usability enquiry to create an online interview method
- Where the system breaks down (beyond the software)
- Relies on insider recommendations

Critical Incident Technique

Credit to Joshua Lawrence.

The Critical Incident Technique is one method that can be used. Here's how we adapted it:

Question Purpose	CIT	Our Adaptation
1. Cause	What were the events leading up to the critical incident?	Tell us about your experience and what you think caused it?
2. Action	What were the behaviors' that took place during the incident?	<i>Combined with Q1.</i>
3. Sentiment	How did you feel during the incident, and afterward?	How did this make you feel during the experience, and afterwards?
4. Outcome	Did you change how you behaved after the incident?	Has this led to a change in how you work? Or what might happen if you don't change how you work?
5. Ideal Outcome	If behaviors' change, what are other possible future outcomes?	What would have been a better outcome?
6. Anything Else?	n/a	Is there anything else you'd like to tell us about the experience?

← Changed incident to experience to improve intelligibility.

← Changed behaviours to work to increase applicability.

← Open question to learn more about the incident.

Method 3: Edinburgh Protocol

○ Understanding patterns of work and what forms of paid and unpaid labour they conduct

Each working day:

- GPS file (from Strava or similar)
- Screenshots of delivery apps
- Audio recorded debriefs LC1
- Photo or videos of waiting or breaks (care to avoid customer information!)
- Follow up 1:1 online interviews
- We paid them an hourly living wage (up to 40 hours)

Diapositive 9

LC0 I would specify which study, the previous slide claims 3 different methodologies.

Title: Edinburgh study

Lord, Carolynne; 2022-04-26T14:07:55.642

LC1 potentially add and home screen (when customer data showing)

T&Cs of apps mean that they shouldn't be sending us customer information.

Lord, Carolynne; 2022-04-26T14:09:03.706

Uploaded screenshots for each job

Accepted order

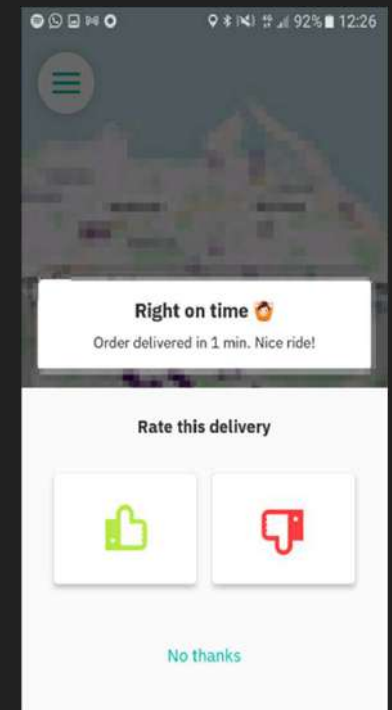

Arrived at restaurant

Received order (from restaurant)

Arrived at customer

Delivered

x (The number of orders you do during a shift)

**What did we
find out?**

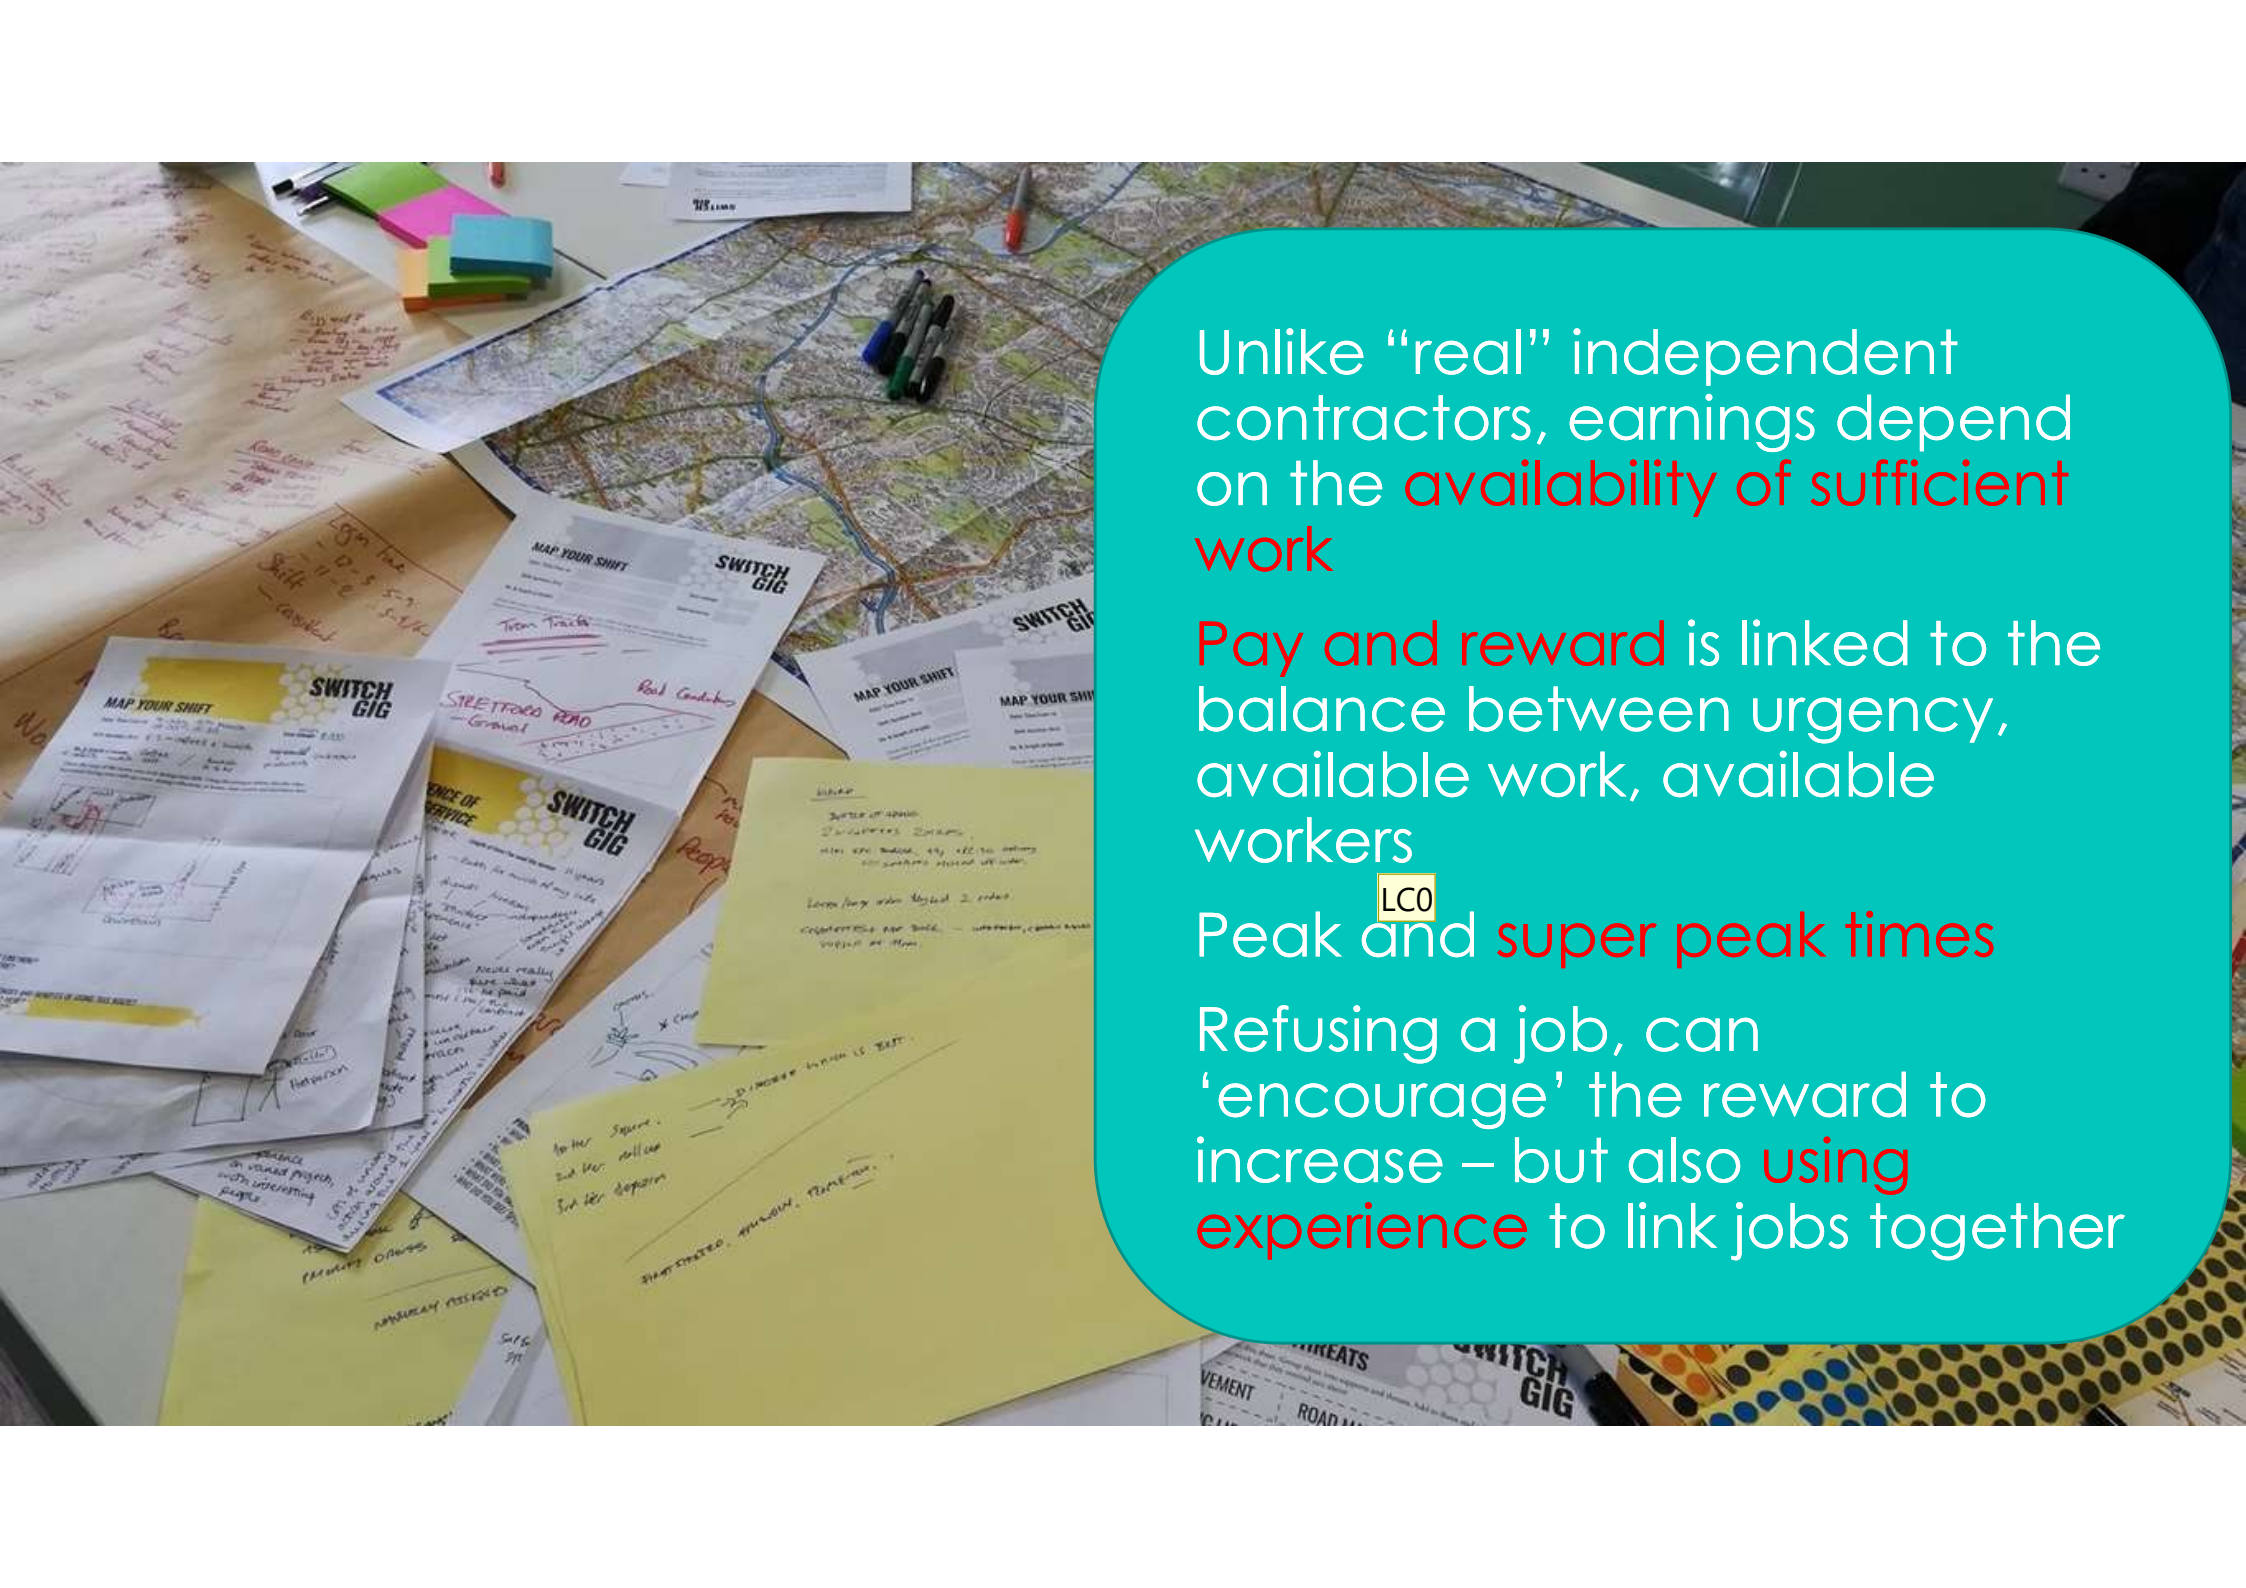

Why do these people gig?

- Love of cycling (50 miles a day is common)
- Can do better than basic living wage (some earn £15ph vs. £8.21)
- Mixture of money, adrenaline and endorphins
- Flexibility to time work around other constraints, e.g. family

Image: <https://www.facebook.com/yorkcollective/>

A photograph of a desk workspace. A large map is spread across the desk. Several 'SWITCH GIG' forms are scattered on the desk, some with handwritten notes. There are also several colorful sticky notes (yellow, green, blue) and a few pens. The forms have sections for 'MAP YOUR SHIFT' and 'SWITCH GIG'.

Unlike “real” independent contractors, earnings depend on the **availability of sufficient work**

Pay and reward is linked to the balance between urgency, available work, available workers

Peak and ^{LC0}**super peak times**

Refusing a job, can ‘encourage’ the reward to increase – but also **using experience** to link jobs together

Diapositive 13

LC0

job rejection is particularly interesting, some of the best paid couriers rejected the most work - i.e., they knew which jobs looked better than they were (e.g., long delivery and therefore bigger pay, but would leave you out in the sticks and no where near a restaurant for the next job).

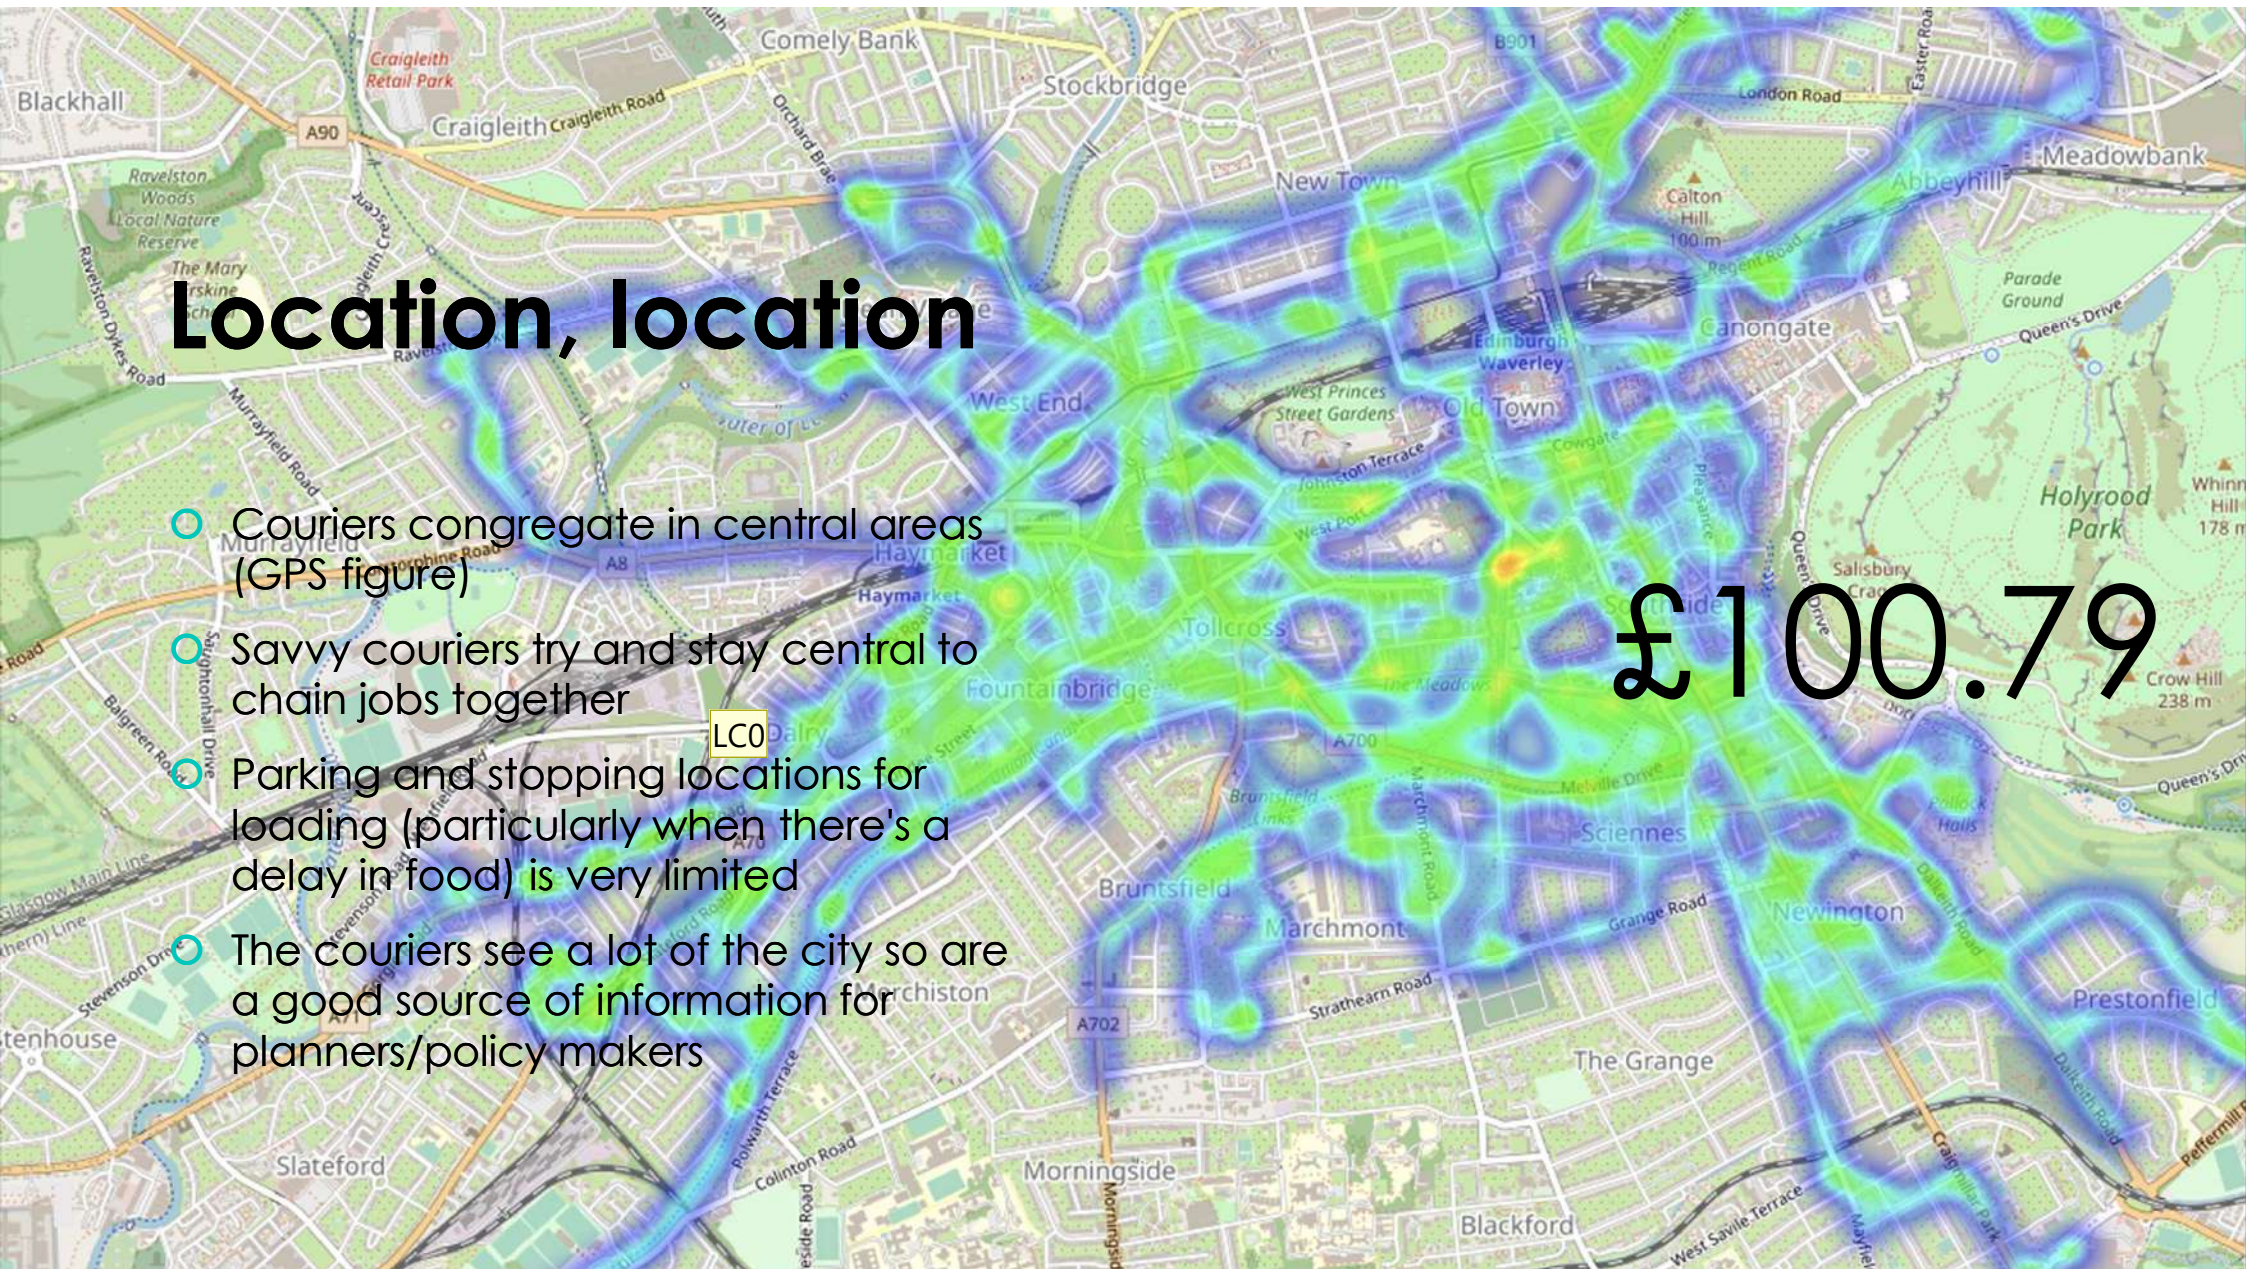

Rejection in my view isn't just about encouraging the algorithm to increase the fee, it's also about knowing the city and which deliveries you can piggyback others from.

Lord, Carolynne; 2022-04-26T14:14:15.245

Location, location

- Couriers congregate in central areas (GPS figure)
- Savvy couriers try and stay central to chain jobs together
- Parking and stopping locations for loading (particularly when there's a delay in food) is very limited
- The couriers see a lot of the city so are a good source of information for planners/policy makers

£100.79

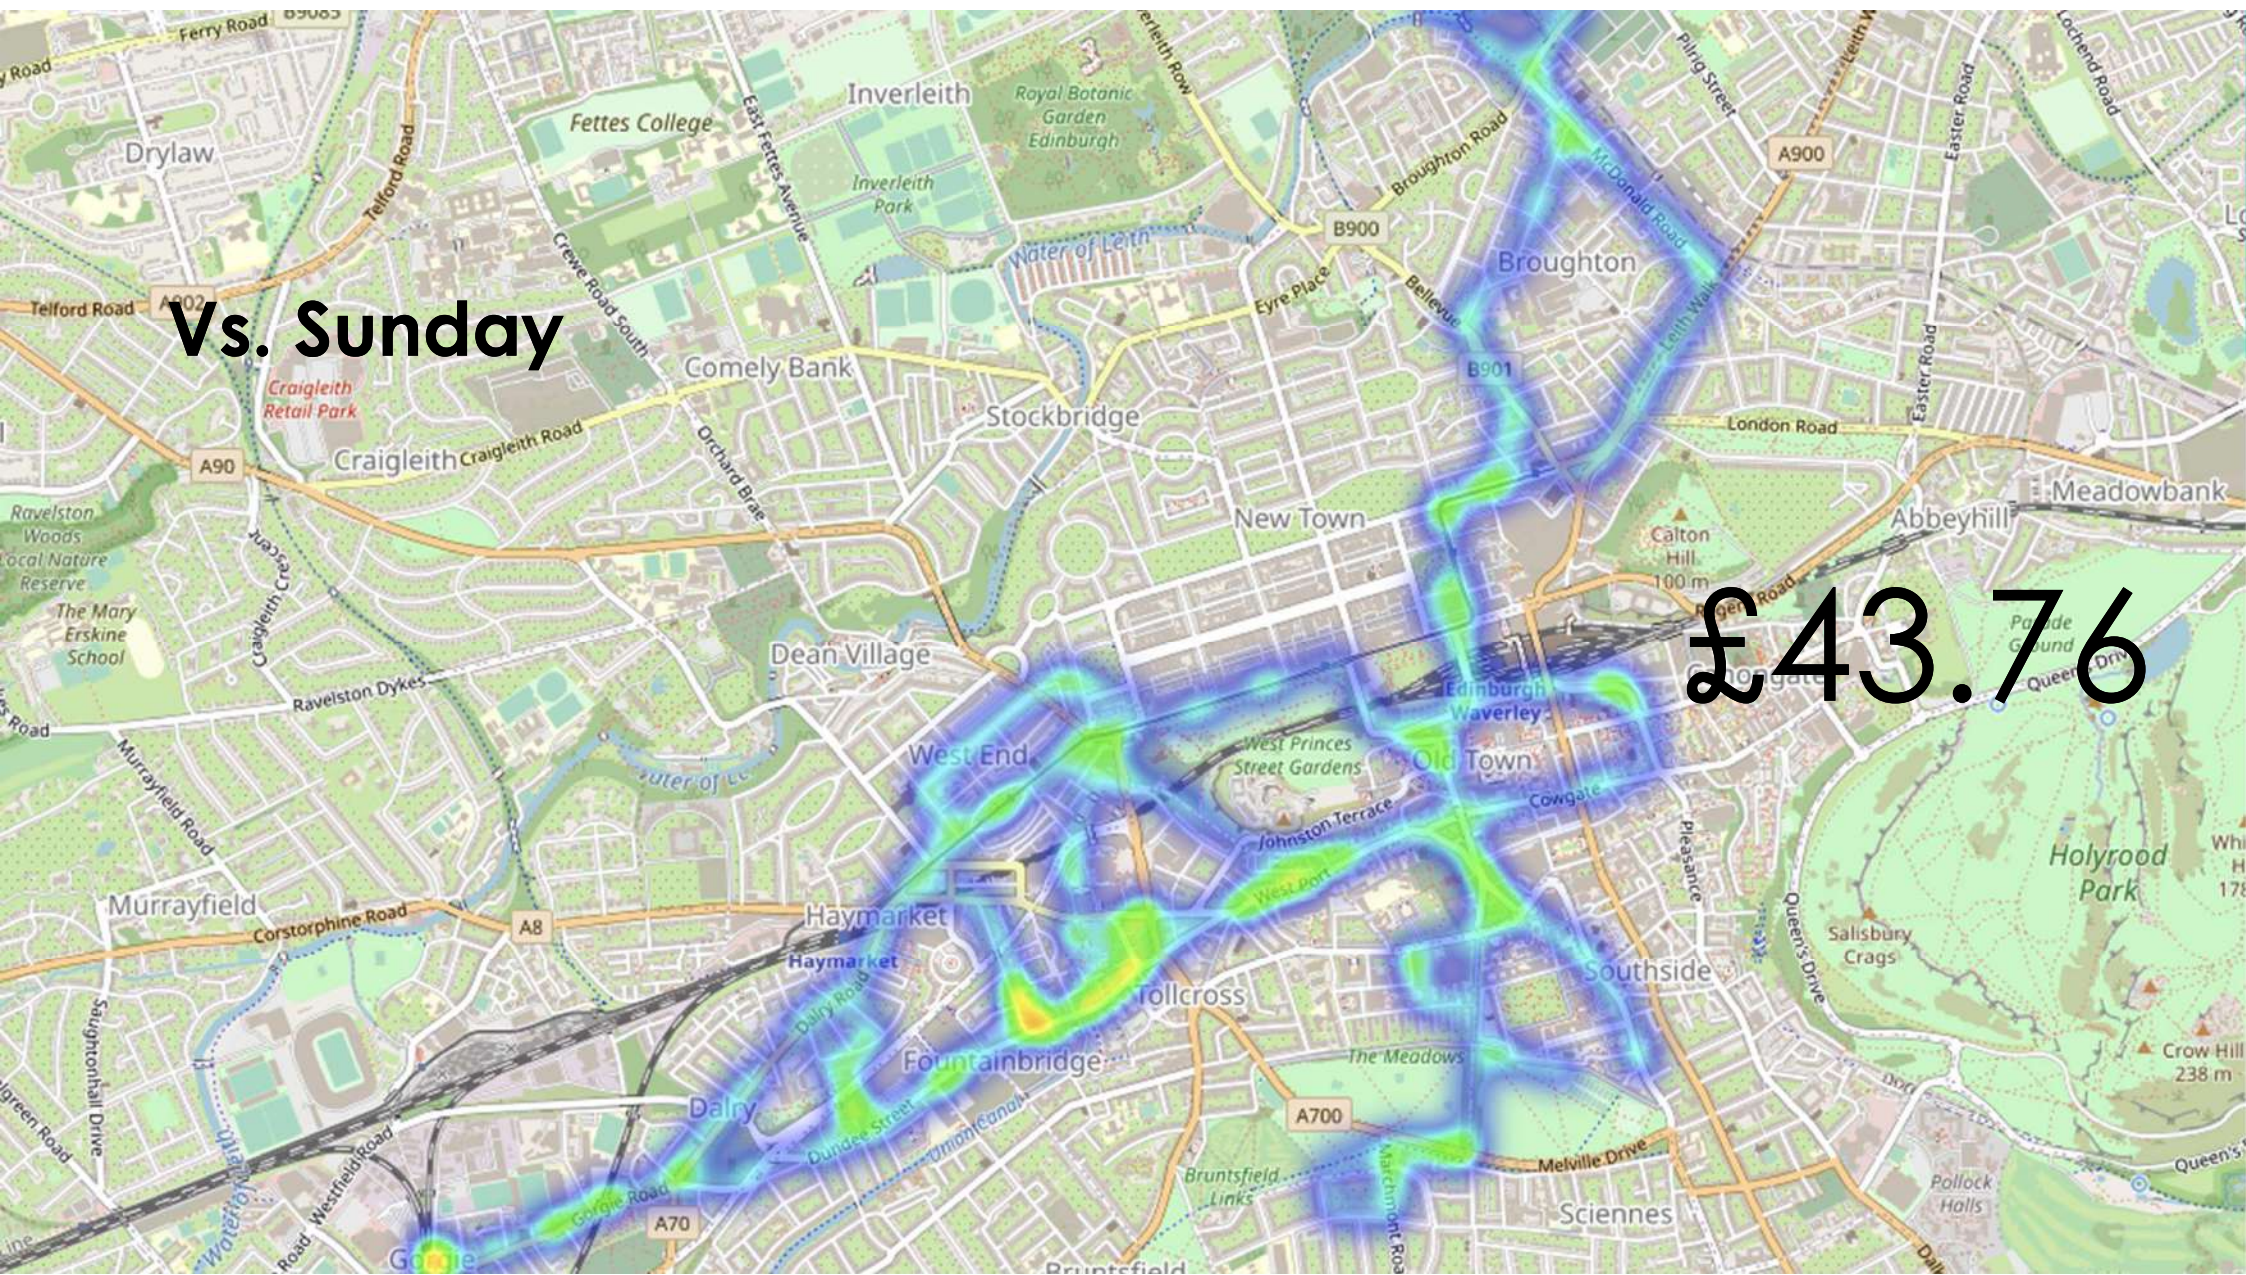

Diapositive 14

LC0 aaa this is where it comes in. Maybe ignore my previous comment then
Lord, Carolynne; 2022-04-26T14:14:51.684

Vs. Sunday

£43.76

Earnings, distance, and number of orders

Payment Screens (EDIN10)

Tuesday missing

Your future as a beta test

"I have worked with deliveroo for 3 years and within my first year **they terminated my contract due to rejecting jobs** which were too far and as I was on an hourly rate of £6 plus £1 per delivery and considered traveling these 1.5 miles plus distances **not worthwhile the time and risk.**"

"now conscious not to get fired again so I have to **only reject jobs under dire circumstances** regardless if I'm getting paid **less than £5 for doing a 4 mile trip** for instance or if the route is unsafe for bikes" P26

Customers play too

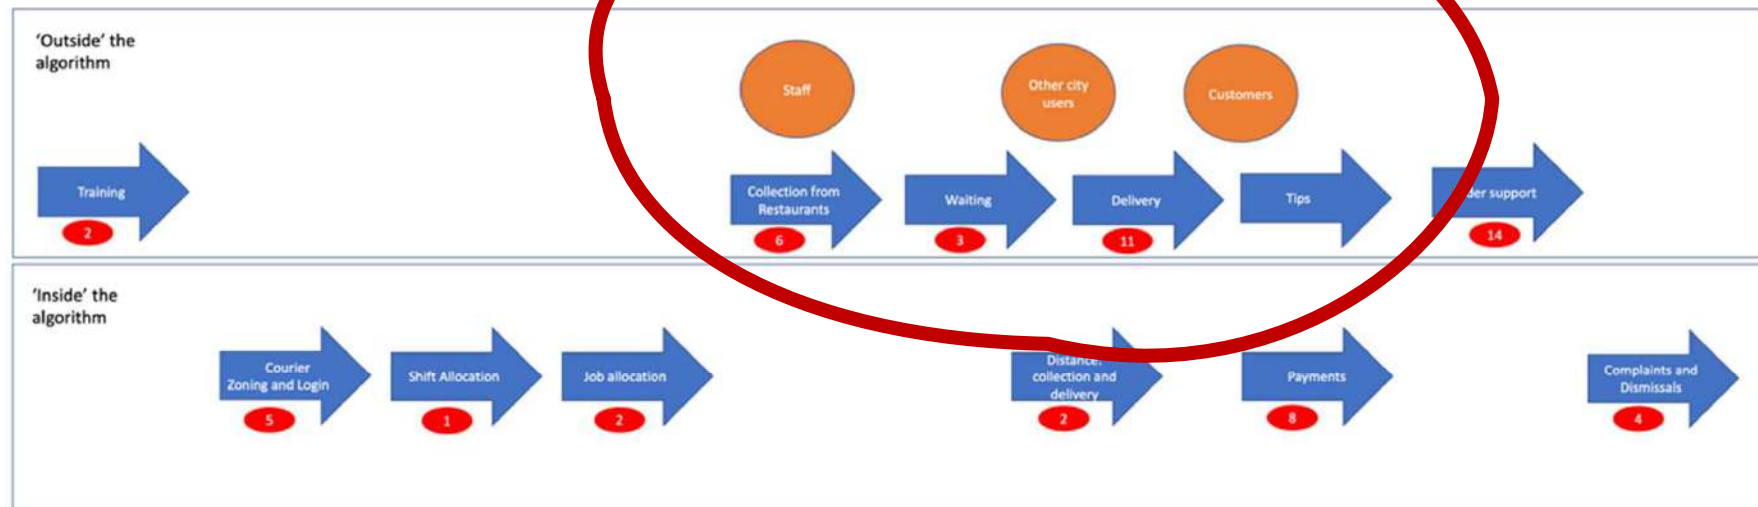

- “I had a customer enter an *incorrect address which didn't exist*. When I called the customer to find out where I should take the food he asked me to deliver to an address outside my zone of work on a high-rise housing estate I don't know well and *did not feel comfortable entering*. I told him I was cancelling the order. I was really frustrated by the loss of time as I was *not paid* for this, and Deliveroo made me return the food to the restaurant.” P4

Collaborative
work, but
workers at 'on
the frontline'

Mapping unfairness

Where does 'unfairness' emerge in the critical incidents reported by gig economy couriers?

Tensions in Cities

- Adversarial **first contact** - The single point of contact between a city and courier tends to be **law enforcement**
- Gig couriers **not treated the same** as other couriers
 - Royal Mail workers in York are allowed to be on bikes/vans in the pedestrianised zones when gig couriers aren't
- Feel under **pressure** and can '**take risks**' to speed things up
- Couriers feel friction with other road users (e.g., lorries), yet are respected by others (e.g., buses)
- **Risk of theft** and personal violence with little protection in most cities

No break rooms, bulletin boards or secure spaces

Help protect everyone's health

-  Wash your hands and bag often
-  Wear a mask
-  Stay 2 metres away from other people
-  Pickup and deliver contact-free

It's critical you follow all COVID-19 safety measures when you work. You can find more info and guidance on the rider website, including a link to order free face masks and

Agree and go online

Restaurant Behaviours

Waiting time at restaurants/shops is highly variable

Food delivery and waves of demand

Restaurant attitudes varies, So workers are more likely to reject certain orders

Couriers' experiences at a restaurant used to predict waiting time / cost benefit of accepting a job

The future?

The Future and the system we are designing

- What can be done to improve transparency and fairness for workers?
- What systems are we getting locked into?
 - Meta platform? Is that just more and more atomised work?
 - Opportunity: bringing life and designing gig infrastructure in cities in a designed way, rather than leaving it to 'just emerge'; accelerating sustainability?
- Fair Work Zone – city commitment to rights and facilities? Toward a minimum supply of work, maximum number of workers, cycling zones?
